AEP Span Architectural Metal Panels Selected for Sutter Health's New Regional Hospital Project

West Sacramento, California, – November 13, 2014 – AEP Span's architectural metal panels were the product of choice for Sutter Health's new Sutter Santa Rosa Regional Hospital project, which opened on October 25, 2014.

The state-of-the-art hospital features AEP Span's 24ga Span Seam[®] roof, curve structures, in a custom Sienna color. The wall applications and equipment screens feature 18ga Box Rib[™] and Reverse Box Rib[™] in Cool Weathered Copper, Cool Sierra Tan, and Cool Zinc Grey, all three of which are part of AEP Span's Cool Dura Tech[®] 5000 standard color offer. Dura Tech[®] 5000 coating combines the corrosion protection of a ZINCALUME[®] substrate with a highly durable resin formulation and cool pigment technology to provide excellent color retention and reduces the demand for energy. Moreover, Dura Tech[®] 5000 is Energy Star certified and listed with the Cool Roof Rating Council.

Before breaking ground on the project, a team of architects, engineers, and contractors met with the owners to evaluate and state goals for the project to ensure a green project design. The design of the facility integrates sustainable building strategies from the ground up and complies with the Leadership in Energy and Environmental Design (LEED) criteria.

Including AEP Span's architectural metal panels in Cool Dura Tech[®] 5000 coating along with other green building material and LEED-compliant innovations represents Sutter Health's commitment to the local community in which it serves and regional sustainability concerns.

Project Details:

Project Size: State-of-the-Art 84 acute care bed hospital

Owner: Sutter Health

Architect: Hammel, Green and Abrahamson, Inc., Roseville, CA

General Contractor: Unger Construction Co, Sacramento, CA

Installer: Van Mulder Sheet Metal, Hayward, CA

Manufacturer of Architectural Metal Panels: AEP Span, Tacoma, WA

ASC Profiles LLC is a subsidiary of BlueScope Steel and Nippon Steel & Sumitomo Metals Corporation. **ASC Profiles** is an industry leading manufacturer of cold-formed steel building components since 1971. **ASC Profiles** consists of three distinct business divisions, each serving a different market segment within the industry. **ASC Steel Deck** delivers a high quality line of structural roof and floor deck that has been fully tested for the commercial construction market. **AEP Span** provides architecturally engineered panels for steel roof and siding products for the commercial and industrial markets. **ASC Building Products** offers high quality steel roof and wall panels for the residential, light commercial, and agricultural markets.
